PROFILE

Final-year BSc (Hons) Applied Artificial Intelligence student at the University of Bradford, expecting First-Class Honours in May 2027. Experience across data science, data analysis, machine-learning evaluation, SQL reporting and full-stack application development. Confident using Python, SQL, Pandas, NumPy, scikit-learn, PyTorch and PostgreSQL to clean data, engineer features, build and evaluate models, automate reporting and communicate technical findings.

EDUCATION AND QUALIFICATIONS

University of Bradford, United Kingdom **Sep 2024 - May 2027**

BSc (Hons) Applied Artificial Intelligence | Expected First-Class Honours

Relevant study includes Advanced AI: Methods and Tools, Data Science for AI, Machine Learning Methods and Models, Fundamentals of AI and Data Analytics, Safe AI: Ethics, Law and Governance, The Applied AI Professional and Industrial AI Project.

TECHNICAL AND SOFTWARE SKILLS

Programming and Data: Python, SQL, PostgreSQL, Pandas, NumPy

Machine Learning and AI: scikit-learn, PyTorch, Hugging Face Transformers, classification, regression, feature engineering, model validation and evaluation

Visualisation and Analytics: Matplotlib, Seaborn, Power BI, Tableau, Excel

Development: Git, GitHub, Jupyter, Next.js, React, TypeScript, Supabase

Engineering Practices: row-level security, automated testing, CI

EMPLOYMENT AND RELEVANT EXPERIENCE

Amdari | Data Science Intern | Remote, UK **Dec 2025 - Jun 2026**

- Built and evaluated classification and regression models in Python and scikit-learn, using validation results to compare model performance and support reliable analysis.
- Cleaned and transformed datasets with Pandas and NumPy, engineered relevant features and performed exploratory analysis to prepare higher-quality inputs for modelling.
- Queried datasets with SQL and visualised findings with Matplotlib and Seaborn, turning technical outputs into clear evidence for discussion and reporting.

University of Bradford | Peer Assisted Learning Leader | Bradford, UK **Sep 2025 - Present**

- Lead peer-learning sessions in programming, algorithms and problem solving, breaking complex concepts into structured explanations for first-year students.
- Facilitate structured workshops and one-to-one technical mentoring, using practical examples to help students work through programming and computer-science problems.
- Adapt explanations to different levels of understanding, strengthening clear technical communication and supportive peer leadership.

Compact Security Services | SIA Door Supervisor (Part-time) **May 2025 - Present**

- Deliver SIA door-supervision and security support across festivals, pubs, clubs and other licensed venues, adapting to varied public-facing environments.
- Support venue security operations across event and nightlife settings, working as part of on-site teams in changing operational environments.

Tshabron Limited | Data and Business Analyst Intern | Remote, Nigeria **Mar 2025 - May 2025**

- Automated financial and sales reporting workflows with SQL and Python, creating repeatable reporting processes from structured business data.
- Developed Tableau dashboards for sales, location and financial-risk analysis, turning business data into clear visual reporting outputs.
- Analysed business data and translated findings into practical reporting outputs for clearer interpretation of sales, location and risk information.

Quantum Analytics | Data Analyst Intern | Remote, UK Oct 2023 - Jan 2024

- Cleaned and analysed datasets using Excel and PostgreSQL, preparing structured data for reliable downstream analysis.
- Built Power BI dashboards from cleaned datasets, converting analysis into concise visual summaries for easier interpretation.
- Automated repeatable Excel data-cleaning steps, improving consistency across recurring analysis tasks.

SELECTED UNIVERSITY AND TECHNICAL PROJECTS

OCCIMA Digital Platform | Next.js, React, TypeScript, Supabase/PostgreSQL

- Developed and maintained occima.org across the public website, member portal and secretariat dashboard, contributing full-stack functionality across multiple user areas.
- Implemented a searchable, paginated member directory, improving how member information can be browsed and retrieved within the platform.
- Added database migrations, row-level security, automated tests and CI checks to strengthen data control and development reliability.

IoT Anomaly Detection | Python, scikit-learn

- Built a Random Forest classifier in Python for malicious IoT network-traffic detection, framing the task as a supervised classification problem.
- Applied categorical encoding, variance filtering and feature-importance selection to refine the modelling feature set.
- Evaluated model performance with classification metrics to compare predictive effectiveness and identify weaknesses.

Telecom Churn Prediction | Python, scikit-learn

- Engineered and merged customer, subscription, engagement, payment and marketing features to create a consolidated modelling dataset.
- Trained and tuned Logistic Regression and Decision Tree models with RandomizedSearchCV to compare alternative churn-prediction approaches.
- Evaluated models with classification metrics, using the results to compare predictive performance across candidate approaches.

FER Emotion Classification | Python, PyTorch

- Fine-tuned a pretrained ResNet-50 on FER2013 to classify seven facial emotions, applying transfer learning to an image-classification task.
- Applied class weighting and image augmentation during training to address class imbalance and improve model robustness.
- Assessed model behaviour with confusion matrices and classification reports, identifying strengths and errors across emotion classes.

ADDITIONAL STRENGTHS

Analytical problem solving | Technical communication | Team collaboration | Independent learning | Research | Time management
